

Living Guide Technology

Specification Version 1.0.0 – Foundations

Preface

Living Guide Technology (LGT) began as an effort to build a companion capable of faithfully accompanying a person's journey. Through iterative engineering, observation, evidence, and refinement, that effort evolved into a person-centric architectural framework founded on continuity, reflection, and ethical architecture.

Purpose

LGT is a person-centric architectural framework whose purpose is to preserve the continuity of an individual's lived experiences so that understanding may emerge through observation, memory, and evidence-based reflection.

Mission

Create intelligent companions that preserve continuity while respecting member agency, evidence, and ethical architecture.

Vision

To establish a framework in which the person remains the architectural center and intelligent systems augment human understanding rather than replace it.

Foundational Principles

- Observation Before Interpretation
- Memory Creates Continuity
- Evidence Before Confidence
- Mirror Before Authority
- Companion Before Oracle
- Person-Centric Architecture
- Augmentation Over Replacement
- Ethical Architecture
- Evolution Through Evidence

Publication Status

QA Approved Baseline. This publication establishes the first constitutional baseline for Living Guide Technology. Future versions expand upon this baseline while preserving historical continuity.
